

## About

This dataset is a set of all UFO sightings reported since 2011. This data set contains information on the location, what was spotted, duration and the political leaning of the state in which the sighting occurred

Alert Count-----	2
Completeness	
Provenance-----	1
User--Reported	1
Collection-----	1
Inaccurate Prediction	1
Description-----	0
Composition-----	0

## Biases

- the UFO sightings are self-reported
- states with larger populations will have more sightings because there would be more people to see them

## Assumptions

- all people are either democratic/ republican/no lean
- the data gathered from the sample accurately depicts political affiliation for the state

## Limitations

- Likely that not everyone who has spotted a UFO has reported it to the database we used
- The sample size for each state's political affiliation is significantly smaller than the actual population
- The UFO sighting dataset is neglecting possible sightings since 2013 (last updated sighting)
